User Manual (ENG): Personal Desktop Assistant

Updated to release 2.2

Installation

The Assistant application is portable and can be launched from the desktop or a USB drive:
Download all necessary files from the [Assistant GitLab project repository]
Windows: download and unzip `AssistenteVOICE_[last release].zip`
Run `assistente.exe`
Linux: download and unzip `AssistenteVOICE_[last release]_linux.zip`
Run `assistente`
Python: download `assistenteVOICE_[last release].py`
Download the complete `_dati/` folder
Make sure your Python installation has all required dependencies (see README)
Place `assistenteVOICE_[last release].py` and the `_dati/` folder in the same directory
Run `assistenteVOICE_[last release].py`
For customization of the default language and other parameters, please refer to the [Assistant .json Configuration Manual]

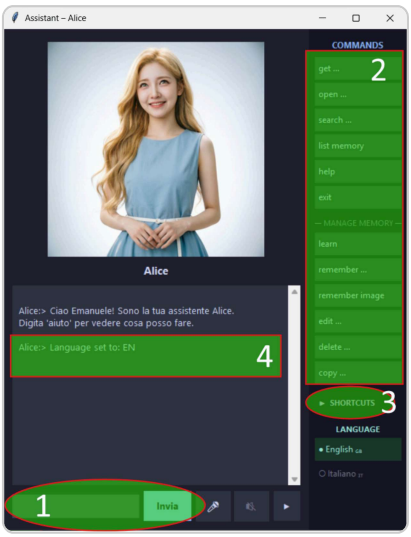
Available Commands



1) Area to enter commands. By pressing the microphone you can use voice commands
2) Command buttons area. If you remember the commands, you can close this sidebar using the arrow at the bottom right, next to the speaker
3) By clicking the arrow on the left of SHORTCUT, you can open/close your personalized shortcut commands (for configuration, please refer to the Assistant .json Configuration Manual)
4) Assistant answer area. On Windows, the answer will be spoken if the speaker is enabled. To stop the reading of the answer, enter the command ok

Language selection

If the language is not correct at startup, change it using the bottom-right buttons. NOTE: the available languages are automatically detected by the application. To change the default language or add new
